La ghisa una scelta sicura ed ecologica. Un investimento di qualità per il vostro bagno!
Le vasche in ghisa ritornano prepotentemente nei ns. bagni e non è soltanto per la loro bellezza ma perchè in realtà offrono parecchi vantaggi e qualità che non hanno le vasche in acrilico, acciaio o altre materie, che richiedono un investimento un po' piu' importante ma che poi si dimostra intelligente nel tempo :

- **Una scelta ecologica:** la ghisa smaltata è riciclabile contrariamente all'acrilico
- **Una scelta di igiene:** lo smalto delle vasche offre una resistenza senza paragoni alla proliferazione batterica. Questa è la ragione per cui hotels e ospedali da sempre privilegiano la ghisa nella loro scelta.
- **Una scelta di sicurezza:** la ghisa è un materiale non infiammabile che non emette alcun gas o fumo tossico in caso d'incendio
- **Una scelta contro l'inquinamento sonoro:** la ghisa assorbe al massimo i rumori dell'acqua e del bagno rispetto all'acrilico e ferro.
- **Una scelta che dura nel tempo:** contrariamente all'acrilico, le vache in ghisa sono indeformabili. Una solidità a prova di tutto e che offre caratteristiche inalterabili nel tempo, una durata e resistenza eccezionale al fuoco, agli urti, e ai prodotti chimici.
- **Una scelta di confort:** le caratteristiche naturali della ghisa offrono una capacità termica massima che vi garantisce la temperatura dell'acqua a lunga durata senza aggiungere acqua calda facendo delle economie.
- **Una manutenzione facile:** matériau denso e non poroso per eccellenza, lo smalto non trattiene ne calcaire ne altri depositi, facilitando la pulizia. Tutte queste qualità valgono ampiamente il piccolo sovraccosto della ghisa rispetto altri materiali. E poi riportato alla durata di vita del prodotto stesso che puo' durare fino a 100 anni, il calcolo di convenienza per questo investimento è presto fatto.

La Fonte : un matériau sécuritaire et écologique. Un investissement de choix pour votre salle de bain !
Les baignoires en fonte émaillée reviennent en force dans nos salles de bain...et ce n'est pas uniquement parce qu'elles sont belles et racées. En effet, elles offrent de nombreuses qualités et avantages que n'ont pas les baignoires en acrylique ou en acier et qui, en dépit d'un investissement un peu plus important, en font un choix malin pour ne pas dire indispensable :

- **Un choix écologique :** la fonte émaillée est recyclable contrairement à l'acrylique
- **Un choix sanitaire :** l'émail des baignoires en fonte offre une résistance sans égal à la prolifération bactérienne. C'est pour cette raison qu'hôtels et hôpitaux doivent privilégier la fonte dans leurs choix d'installations sanitaires.
- **Un choix sécuritaire :** la fonte est un matériau ininflammable n'offrant aucun dégagement de gaz ou de fumées toxiques en cas d'incendie
- **Un choix contre la pollution sonore :** la fonte émaillée absorbe un maximum des bruits d'eau et du bain contrairement aux baignoires acryliques ou en acier.
- **Un choix ancré dans le temps :** contrairement à celles en acrylique, les baignoires en fonte sont parfaitement indéformables. D'une solidité à toute épreuve, elles offrent des caractéristiques d'inaltérabilité, de durabilité et une résistance exceptionnelle au feu, aux chocs et aux produits chimiques.
- **Un choix de confort :** les caractéristiques naturelles de la fonte offrent une capacité thermique maximale vous garantissant un bain à bonne température longtemps sans rajout d'eau chaude et aussi par là même de substantielles économies.
- **Un choix d'entretien facile:** matériau dense et non poreux par excellence, l'émail n'accroche ni le calcaire ni d'autres dépôts ce qui facilite grandement son entretien. Toutes ces qualités valent largement le petit surcoût supplémentaire lors de l'acquisition d'une baignoire en fonte comparé à une baignoire en acrylique. Et puis, ramené à la durée de vie d'un tel produit qui peut aller jusqu'à plus de 100 ans, le calcul de rentabilité de son investissement est vite fait.

Enameled cast iron : a safe and ecological material . A smart choice for your bathroom!
Enameled cast iron bathtubs are back for good in our bathrooms ... and this is not only because they are beautiful. Indeed, they offer many features and benefits that do not have the acrylic or steel bathtubs. And despite a slightly larger investment , they do represent a smart if not essential choice for many reasons:

- **An ecological choice:** cast iron is recyclable unlike acrylic. Therefore it does protect our planet!
- **A health choice :** enamel cast iron bathtubs offer unmatched resistance to bacterial proliferation. . It is this essential characteristic that leads hospitals and Palace hotels to favor cast iron bath tubs in their Bathrooms.
- **A safe choice :** the cast is a non flammable material. It does not release gas or toxic fumes in case of fire unlike acrylic
- **An anti noise pollution choice :** Cast iron ideally absorbs all noise of water and bath unlike steel or acrylic. It offers you a quiet bath everyday
- **A long term investment choice :** A rock solid, enameled cast iron offers exceptional features of inalterability, durability and exceptional resistance to fire, impacts and chemicals. They are also perfectly non-deformable unlike those in acrylic
- **A comfort choice:** The natural characteristics of the cast offer maximum thermal capacity.

You keep the assurance of a good bath temperature without addition of hot water or losing the heat too fast like with acrylic tubs.

- **A maintenance easy choice :** The enamel is a dense, non-porous material which does get limestone or other potential deposits. Maintenance and cleaning is therefore very easy. All these qualities are well worth the extra cost when buying a cast iron bathtub compared to acrylic or steel bathtub . And your return on investment is even more obvious when you consider that such product has a life cycle of more than 100 years!

Piede Fleur

A photograph of a green clawfoot bathtub in a bathroom. The tub is positioned in front of a large mirror with a decorative, diamond-patterned frame. To the left of the tub is a large potted plant with long, green leaves. To the right is another potted plant with long, thin green leaves. The floor is light-colored, and the wall is white. A green banner with the text "Old Lavande" is overlaid on the top left of the image.

HOW TO CLEAN YOUR TAPS

Come pulire i vostri rubinetti
Comment nettoyer vos robinets

EN Cleaning your faucet does not have to be a time-consuming task. When turning off your faucet with wet hands, you almost always leave drops of water on it. These dry and leave limescale behind. Visible limescale can form quickly, so you should dry the surface of your faucet with a microfibre cloth after each use. This will allow you to extend the intervals between regular cleanings.

Follow these simple tips to regularly clean and remove limescale from your faucet to easily keep it looking like new for years to come:

- Clean with warm water, a gentle soap (Neutral pH), and a soft microfibre cloth or sponge but be sure to avoid harsh and abrasive chemicals and cleaners.
- Never use scouring pads, steel wool, or any other hard scrubbing pad.

N.B. These tips are applicable for all metal finishes.

ITA La pulizia del rubinetto non deve essere un compito che richiede troppo tempo. Quando si chiude il rubinetto con le mani bagnate, quasi sempre vengono lasciate sopra delle gocce d'acqua. Queste si asciugano e lasciano dietro il calcare. Il calcare visibile può formarsi rapidamente, quindi si deve asciugare la superficie del rubinetto con un panno in microfibra dopo ogni utilizzo. Ciò consentirà di prolungare gli intervalli tra le pulizie regolari.

Seguire questi semplici consigli per pulire regolarmente e rimuovere il calcare dal rubinetto per mantenerlo facilmente come nuovo per gli anni a venire:

- Pulire con acqua tiepida, un sapone delicato (pH neutro) e un panno morbido in microfibra o una spugna, ma assicurarsi di evitare prodotti chimici e detergenti aggressivi e abrasivi.
- Non utilizzare mai spugnette abrasive, lana d'acciaio o qualsiasi altra spugna dura.

N.B. Questi suggerimenti sono applicabili a tutte le finiture metalliche.

FR Le nettoyage de votre robinet ne doit pas être une tâche fastidieuse. Lorsque vous fermez votre robinet avec les mains mouillées, vous laissez presque toujours des gouttes d'eau dessus. Ceux-ci séchent et laissent du calcaire derrière eux. Le calcaire visible peut se former rapidement, vous devez donc essuyer la surface de votre robinet avec un chiffon en microfibre après chaque utilisation. Cela vous permettra de prolonger les intervalles entre les nettoyages réguliers.

Suivez ces conseils simples pour nettoyer et éliminer régulièrement le calcaire de votre robinet afin de le garder facilement comme neuf pour les années à venir :

- Nettoyez avec de l'eau tiède, un savon doux (pH neutre) et un chiffon doux en microfibre ou une éponge, mais assurez-vous d'éviter les produits chimiques et nettoyeurs agressifs et abrasifs.
- N'utilisez jamais de tampons à récurer, de laine d'acier ou tout autre tampon à récurer dur.

N.B. Ces conseils sont applicables pour toutes les finitions métalliques.
